

6 MUST KNOW QUESTIONS TO CONQUER

CIRCLES

1	<p>(i) Write down the equation of the circle with centre $A(8, 2)$ and radius $\sqrt{80}$. This circle intersects the y-axis at points P and Q.</p> <p>(ii) Find the length PQ. A second circle, centre B, also passes through P and Q.</p> <p>(iii) State the y-coordinate of B. Given that the x-coordinate of B is negative and that the radius of the second circle is 5, find</p> <p>(iv) the x-coordinate of B.</p> <p style="margin-top: 10px;">Ans: $(x - 8)^2 + (y - 2)^2 = 80$, (ii) $PQ = 8$ units, (iii) 2 (iv) $k = 3$ (rej), $k = -3$</p>
2	<p>The equation of a circle C is $x^2 + 6x + y^2 - 10y = 66$.</p> <p>(i) Find the radius and the coordinates of the centre of the circle.</p> <p>(ii) Given that PQ is the diameter of the circle, where P is the point $(5, 11)$, find the coordinates of the point Q.</p> <p>(iii) Find the equation of the circle C_1, which is a reflection of the circle C in the line $x = -1$.</p> <p style="margin-top: 10px;">Ans: radius = 10 units, (ii) $Q(-11, -1)$, (iii) $(x - 1)^2 + (y - 5)^2 = 100$</p>
3	<p>A circle C_1 has the equation $(x - 4)^2 + (y - 6)^2 = 100$ and another circle C_2 has the equation $x^2 + y^2 + 2x - 16y + 49 = 0$.</p> <p>(i) Find the coordinates of the centre of the circle C_2 and its radius.</p> <p>(ii) Show that C_2 lies completely inside of C_1.</p> <p style="margin-top: 10px;">Ans: (i) Centre $(-1, 8)$ (ii) Shown</p>
4	<p>The positive x- and y-axes are tangents to a circle C.</p> <p>(i) What can be deduced about the coordinates of the centre of C. The line T is tangent to C at the point $(8, 1)$ on the circle. Given that the centre of C lies above and to the right of $(8, 1)$, find</p> <p>(ii) the equation of C,</p> <p>(iii) the equation of T.</p> <p style="margin-top: 10px;">Ans: (i) The values of the x and y coordinates are the same. (ii) $(x - 13)^2 + (y - 13)^2 = 13^2$ (iii) $y = -\frac{5}{12}x + \frac{13}{3}$</p>

5	<p>A circle, centre C, has a diameter AB where A is the point $(-13, -4)$ and B is the point $(3, 8)$.</p> <p>(i) Find the coordinates of C and the radius of the circle. (ii) Find the equation of the circle. (iii) Show that the equation of the tangent to the circle at A is $3y + 4x = -64$.</p> <p>Ans: $C(-5, 2)$, radius = 10, (ii) $(x + 5)^2 + (y - 2)^2 = 100$ (iii) Shown</p>
6	<p>A circle C_1, centre $C(3, -1)$, has a diameter AB where A is the point $(6, 3)$.</p> <p>(i) Find the radius of the circle C_1 and the coordinates of B. (ii) Find the equation of the circle C_1. (iii) Show that the equation of the tangent to the circle at A is $4y + 3x - 30 = 0$. The circle C_2 is the reflection of the circle C_1 along the y-axis. (iv) Find the equation of the circle C_2. (v) Find the coordinates of the points of intersection of the two circles.</p> <p>Ans: (i) $r = 5$ units, $B = (0, -5)$ (ii) Eqn $C_1: (x - 3)^2 + (y + 1)^2 = 5^2$ (iii) Shown (iv) $C_2: (x + 3)^2 + (y + 1)^2 = 5^2$ (v) $(0, 3)$ & $(0, -5)$</p>
